12/12 CONCLUSIONS & PERSPECTIVES :

Morphological Analysis from Curvature-based Signatures :

Need to control acquisition and processing to create a homogenous dataset

(Almost) fully automated pipeline

Efficient data discrimination/shape description

Limits (work in progress):

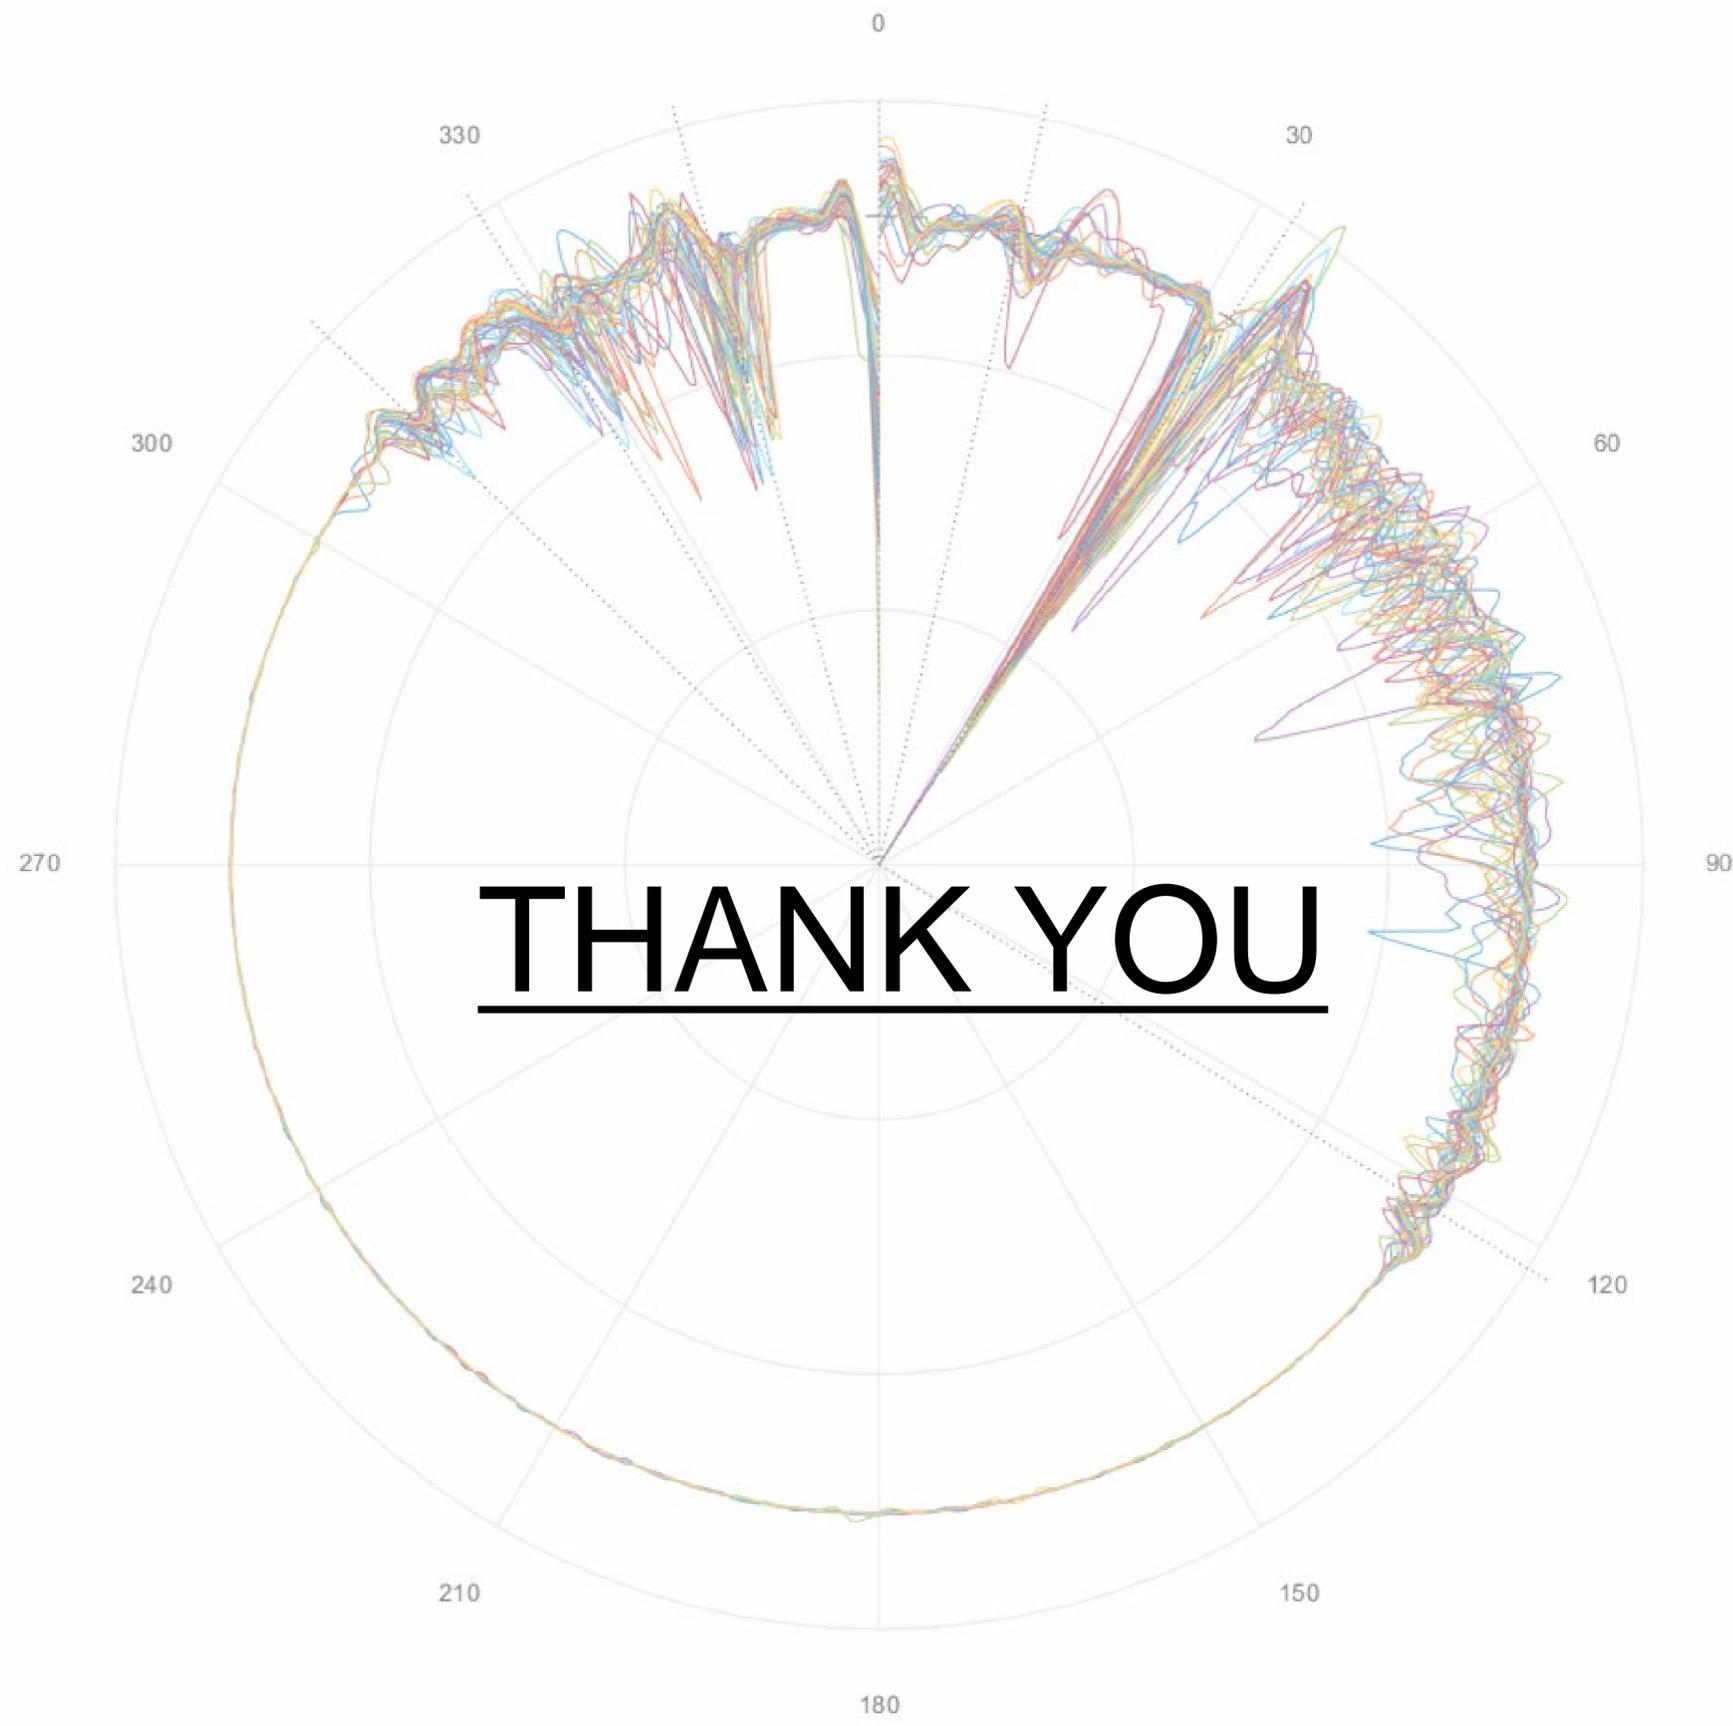

Non-automated semantic recognition (annotation tool?)

Non-applicable on all geometries/morphologies

On-going :

Exploring other descriptors and their possible correlations

Investigating signal processing (PCA, cross-correlation...)
